

## STELLAR SYSTEMS

SLOBODAN NINKOVIĆ

*Astronomical Observatory, Volgina 7, 11050 Belgrade*

**Abstract.** A review concerning the current state of research in the field of stellar astronomy is given. The level corresponds to that of undergraduate students. Stellar astronomy is defined as a general science studying stellar systems, but without including cosmology (which studies the universe as a whole). It is emphasized that the problems are far from being exhausted, as well as that the conditions for developing stellar astronomy in this country do exist.
