

STARRY HERITAGE: PARC AND VEGETATION CONSERVATION WITHIN THE COMPLEX OF ASTRONOMICAL OBSERVATORY

This paper presents the comparison of the existing and designed state of the park and vegetation in the complex of Astronomical Observatory in Belgrade. The essence of this paper lies in systematization and research of initial design of Observatory's park space; green areas impact on complexity of architectural solution analysis and study of correlation of two different architectural approaches: Modern architecture and academic architectural style.

Key words: Complex of Astronomical Observatory, cultural heritage, landscape architecture
