

GENERAL CLASSIFICATION OF “COSMIC ENERGY” BY ĐORĐE STANOJEVIĆ

Theoretical and practical findings on which Đorđe Stanojević relied upon when classifying “cosmic energy”, are displayed. His systematization of forms in which matter occurs is presented. These are: body, molecule, atom, and cell. Based on the form of matter, the division of the “cosmic energy” into an energy of a body, a molecular energy, an atomic energy and a cell energy, was made. The division of energy is followed by the division of natural sciences, by which Stanojević encompasses not only the general classification which was his goal but also the subject matter of natural sciences.

Key words: Djordje Stanojević, cosmic energy, matter, natural sciences
