

**FROM OUR SCIENTIFIC AND PHILOSOPHICAL THOUGHT:
MILIVOJE S. DOBROSAVLJEVIĆ
(1875 – 1950)**

The present paper is devoted to a work of Milivoje S. Dobrosavljević entitled “Sa Ajnštajnom kroz nauke” (“With Einstein through Sciences”) published in Belgrade in four volumes which were printed between 1928 and 1931. This is one of the first works written in Serbian which deals with Einstein’s scientific results, first of all, with theory of relativity. Milivoje Dobrosavljević spent all his working time in secondary schools where he taught, among others, cosmography. In this work of his Dobrosavljević also writes about non-euclidean geometries, about the Universe (where he prefers the Latin word to the Slav one), about other topics, including the consequences for biology and social sciences. It can be noted that he was a consistent materialist and evolutionist.

Key words: Milivoje S. Dobrosavljević, history of astronomy, theory of relativity, philosophy
