

PROJECT “MEETING OF THE WORLDS 3”

School project “Meeting of the Worlds 3” in 2019 brought together twenty elementary schools working with the same goal. The schools that took part were from the Republic of Serbia, the Republic of North Macedonia and the Republic of Montenegro. This school project has an interdisciplinary, intercultural and international character. The popularization of scientific ideas and realization coming from areas which are not present in our schools are indicative of the need to promote them and encourage the participants to develop their interests and strengthen their competence. Astronomy and related sciences still draw attention with their achievements. Our project has entirely succeeded in all its goals and in promoting the international project “World Space Week” UN. Participants were organized to take part in various activities, and bringing all these activities together yielded a great number of creative products. It enabled a usage of available and needed materials. The outcomes were numerous and outstanding. On November the 28th in 2020 two examples of good practice were published on the Teacher’s Council organized by the SURS (Teachers’ Society of the Republic of Serbia) and the Faculty of Pedagogy Belgrade.

Key words: Promotion of Astronomy, interdisciplinary and intercultural contents, competencies development.
