

WORK OF THE ASTRONOMICAL SOCIETY "RUDJER BOŠKOVIĆ" IN 2022

The work of the Astronomical Society "Rudjer Bošković" in 2022, the third year of the corona virus pandemic, which left the Society without permanent employees at the end of 2020, was presented. During 2022, Milan Jeličić, secretary of the Society, and Ivan Ćurić, member, still worked daily as volunteers at the People's Observatory and Planetarium. In the second half of 2022, as a real refreshment, they were joined by the enthusiastic Dr Branislav-Brana Rovčanin, who was very busy with the restoration of the Zeiss telescope, the arrangement of the Tower and the acquisition of astronomical and other equipment. We also mention VASIONA's editor in chief, Dr. Milan S. Dimitrijević and technical editor Aleksandar Simonović, as well as the lecturer of the Society's main annual activity, the spring and autumn Astronomy Course for Beginners, Dr Slobodan Ninković. The supervisor of their work, as well as the efforts of other members, was Dr Miodrag Dačić, president of the Society's Steering committee. With his ever-present camera, he was the authenticator and guardian of numerous sequences from the Society's activities.

It was concluded that the year 2022 was rich in various contents and that despite the covid pandemic, it was restorative and successful.

Key words: Astronomical Society "Rudjer Bošković", People's Observatory, Planetarium
