

THE INITIATIVE FOR MARKING THE MERIDIAN AND PLACING A PARALLEL GLOBE ON KALEMEGDAN - HOW TO IMPLEMENT IT AFTER THE POSITIVE ANSWERS?

At the Conference Development of Astronomy among Serbs XI, which was held in Belgrade from April 18 to 22, 2021, a lecture entitled "Parallel globe in the hands of Eratosthenes, Milanković, Jefferson, educators and students" was held. On that occasion, a concise overview of the application of the sunlit and correctly oriented model of the Earth - the Parallel Globe - throughout the history of science and education was given. The educational value of the Parallel Globe (DING) in integrated, ambient and hybrid teaching is great and justified, so an initiative was launched at the Conference to place a Parallel Globe in the surroundings of the People's Observatory on Kalemegdan, and to mark the local meridian below the Pobednik (Winner) monument. The paper will describe the activities related to the submission of this initiative, as well as the responses of the authorities with the idea of finding an answer to the question "How to implement it after positive responses?"

Key words: Parallel globe, visualization, meridian, insolation of the Earth, Eratosthenes, Milanković
