

# **CELESTIAL AND ASTRONOMICAL PHENOMENA IN THE MEDIEVAL APOCRYPHA**

Celestial and astronomical phenomena in the medieval apocrypha are discussed. We chose to observe celestial phenomena as well, because in the Middle Ages no distinction was made between the starry sky and the daytime sky. Today, we know that the sky is the result of the refraction of the Sun's rays as they pass through the Earth's atmosphere. That's why we will look at meteorological phenomena as celestial phenomena.
