

# **THE INSOLATION CURVE OF THE MILANKOVIĆ FROM THE MAXIMUM OF THE LAST GLACIATION TO THE BEGINNING OF THE LEPENSKI VIR CULTURE**

The period of last 25000 years is correlated with the insolation diagram of Milanković, and with results and analysis of the ratio  $^{18}\text{O}/^{16}\text{O}$  or  $^{18}\text{O}$  from ice samples from Antarctic and Grenland. Other paleoclimatological data are used as well. In particular, the climate of Balkan peninsula, especially Serbia is considered.
