

TOTAL SOLAR ECLIPSE ON AUGUST 11th 1999 - 10 YEARS LATER

The observation of total solar eclipse on August 11th 1999 the author of this paper planned many years ago (from 1976) and realized successfully with a team of friends, collaborators amateurs. Ten years later presents an occasion to make a recapitulation of achieved results, obtained in practically impossible conditions – bombing of Serbia just stopped, we projected and made completely new apparatus for observation. The expedition to Palic town, where successful, planned results were realized, and all stay, is in good memories of members of the team composed from members of five families – Tomic & Urosevic from Belgrade, Fisher from Palic, Jovanovic from Gradiska (Bosnia and Herzegovina) & Janjic from Wien (Austria). Summary of the whole activity and a list of papers on solar eclipses, published by the author during a long period, are given.
