

## **SOME VIEWS CONCERNING ASTRONOMY IN THE MEDIEVAL SERBIA**

Astronomy in the medieval Serbia as a part of general culture could be under a Byzantine, but also under a western Christian influence. It is well known that in a number of manuscripts from that time some celestial phenomena were mentioned, as well as that a contact with some Byzantine scholars whose field, among others, involved also astronomy (T. Metochites, N. Gregora) existed. Nevertheless, it is still unclear in what way and to what degree these influences reflected on the astronomy development in the medieval Serbia.
