

LIBRARY OF THE SCHOOL AND INTRODUCTION OF PUPILS IN THE WORLD OF ASTRONOMY

Elementary school library can play a significant role in the modern educational process, which is reflected not only in providing the necessary information resources, but also contributing to the multidisciplinary teaching and integrative linking of subjects and disciplines. In our paper we consider the presence of astronomical topics and categories in the curriculum of the Serbian language and geography in primary schools and addresses the common examples of lessons, from the aspect of the case and with the participation of school librarians. In addition, it points to the practical possibilities for the organization of teaching and extracurricular activities that will provide support to students to acquire basic knowledge about the universe and man in it.
