

## **SPEED, INTERNET AND ELECTRONIC LITERATURE**

Speed has a significant impact on the art of romanticism to the avant-garde and electronic art. She became one of the greatest fascination because it implies movement and change, along with the acceleration of technical development. Speed contributed to see the fragmentation of the world, bring multiple perspectives to create a different space-time. It is first expressed in the art of collage. The strong development of electronic technology and flow velocity data allowed the emergence of pictures on the Internet, development and internal dynamics of the electronic text. It can be argued that the real father of Web - SPEED. Small letter v became amplified and multiplied many times www.
