

COSMOLOGY OF ART MUSIC

In the paper is summarized a brief overview of the compositions which in the title or in any of part have real or astronomical term, a crucial idea from astronomy and how it makes the music. Our goal is to present the existing connection between astronomy and music, and thus establish a link between scientific and artistic knowledge, and also to demonstrate how sound, made in accordance with the principles of physics of the universe and the movements of the planets can be used as a basis for musical composition, theorizing and aesthetic evaluation. In our study, we combined the scientific and artistic approach to different music contents, which are precisely the cosmic elements of the basis of expressive musical structure.
