We present observations of the Magellanic-type dwarf irregular galaxy NGC1156 in narrow band [SII] and H $\alpha$  filters, carried out in November 2015 with the 2m RCC telescope at Rozhen National Astronomical Observatory in Bulgaria. Although our observations were with the intention to find new extragalactic supernova remnant candidates, we were successful only in the detection of HII regions.

## **EVOLUTION IN THE SYSTEM CORONA-DISK**

## Krasimira Dimitrova Yankova

Space Research and Technology Institute - BAS Acad G. Bonchev Str., Bl. 1, 1113 Sofia, Bulgaria E-mail: f7@space.bas.bg

This paper considers magneto-hydrodynamics of the system disk-corona. We will researching the structuring of the flow on the secondary component. Analyze the influence of the destributions on boundery with the primary component. Discusses the significance of the type of the border for exchange of energy between components.
